Connecting the mobile phone - Car kit

2. Turn on Bluetooth on your mobile phone and search for the same device name as on the car screen, usually the bluetooth name will be brand of the car.
3. Confirm automatic pairing and wait for connection. The connected Car Kit light turns green.

Warning: If the car doesn't show up in the bluetooth list of devices to pair on your mobile phone reboot the phone and turn your car ignition off and on.

Some mobile phones require activation of the Android Auto service for Android or Carplay for Iphone in the phone settings.

Firmware update

1. Connect the Car kit to the power source using the USB-C cable - The red light on the Car kit will light up.
2. Connect to the Car kit via Wi-Fi on your mobile phone (password: 12345678)
tip: The Wi-Fi name is usually the brand of the car.

3. Scan the QR code or enter the address to phone browser:
192.168.50.2

4. After scanning the QR code, the Car Kit MENU will open, you may be prompted to confirm your vehicle model and year of manufacture. If the car kit has already been connected to the vehicle it will be filled in automatically.

Introduction

- ◆ The device is used to wirelessly connect mobile phones to cars equipped with the CarPlay system and Android Auto. It will allow you to quickly and after the first setup automatically pair CarPlay / Android Auto with your phone without the need for a cable connection between the phone and the car.

Specifications

- ◆ Input: 5V 1~2.1A
- ◆ Output power: DC 5V 0.8~2A
- ◆ Power consumption: 0.15W

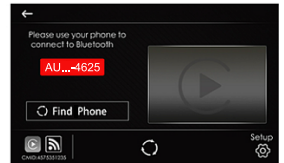

Compatibility

- ◆ The device is compatible with cars which support Apple CarPlay and Android Auto direct cable connection.
- ◆ Supports iPhone 6 and later, suitable for iOS 10 versions and above / Android 9.0 and above, suitable for Android 11.0 and newer.

Connecting the mobile phone - Car kit

1. In the car, connect the Car kit to the USB output for Carplay / Android Auto. The red light on the device will light up.

You will see the Car kit pro interface on the vehicle screen phone connection.

Firmware update

- 5A. For Iphone: Choose Check Update in MENU Car kit. - If there is a new version it will be offered to you automatically Download. Confirm the download, after downloading to your phone it will automatically upload the new version to Car kit. Car kit will restart after the update is complete. (The red light goes out and lights up again.)
- 5B. For Android: After loading the Car Kit menu, turn off wi-Fi using the top menu in the phone for turning off wifi. Do not leave the Car kit MENU, the phone will automatically connect to mobile data. After the phone connects to mobile data tap the Check Update button. After downloading the update, you need to connect to Car kit wi-Fi again and return to the Car kit MENU where the update is automatically recognized and it will start uploading to your device. Once done the Car kit will restart. (The red light goes out and lights up again.)
6. Disconnect the updated Car kit from the USB and plug it back into the car.

Warning: Do not disconnect Car Kit during update and installation from the USB and do not close the browser with the Car Kit MENU.

For Android: If you don't have mobile data, it's necessary to switch the Wi-Fi connection between the Car kit connection and local wi-fi.
